

Sergey Volynkin

Software & Platform Engineer

· Saint Petersburg · Russian · English

I work across software development and infrastructure: adapt open-source products, build services and operate them on Linux. My work combines Python development, changes to existing Go codebases, Docker deployment, databases, CI/CD, monitoring and identity integrations. I take changes from source code through integration to production support.

Email: volynkin.s04@gmail.com Telegram: [@volynkin_s](https://t.me/@volynkin_s) GitHub: github.com/volynkinss Phone: **+7 (999) 022-60-61**

Open to office roles in Saint Petersburg, hybrid, remote and contract work with Russian or international companies. International relocation with employer support.

IBK LLC

Lead System Administrator

Import Substitution Solutions Department

Sep 2025 — Present

Implement and adapt open-source solutions in a six-person engineering team. My scope covers source code changes, Linux operations, deployment, application integrations and troubleshooting.

RDPGW

Business-critical remote access

Production · 70–100 daily users

- Added terminal farm / RDS collection support to an existing Go gateway, plus SQLite-backed connection history, active-session views and filtered Excel export.
- Build, deploy and support the gateway used for remote work; investigate authentication and connection issues.

· Go · Linux · Docker · SQLite · OIDC

Dashboard

Internal service catalog

- Built a FastAPI portal with a PostgreSQL service catalog, Dashy YAML import and a bilingual interface.
- Integrated Keycloak/OIDC sign-in, group-based service visibility, persistent sessions and audit logging; packaged the portal with Docker Compose.

· Python · FastAPI · Jinja2 · PostgreSQL · Keycloak · Docker Compose

Source on GitHub (<https://github.com/volynkinss/dashboard>)

Pulp

Package and artifact repositories

In progress

- Evaluate and deploy Pulp in Docker: repositories, remotes, distributions, reverse proxy and authentication integration.
- Design the operating model for upstream retrieval and local artifact reuse, including serving previously downloaded artifacts without external internet access.

· Pulp · Docker · Reverse proxy

Keycloak

Application identity integration

- Administer Keycloak and integrate applications with SAML 2.0 and OIDC together with my manager.
- Troubleshoot SAMLResponse assertions, NameID and attribute mapping, ACS flows and service provider / identity provider interactions.

· Keycloak · SAML 2.0 · OIDC

Automated export of Postman API collections and environments for migration to Hoppscotch.

Selected projects

Independent engineering and product work alongside my current employment. Software development, deployment and ongoing service operations.

BoltFather

Co-owner & Backend / Platform Engineer · 25% ownership

Feb 2024 — Present

Production

Telegram community access and subscription service with TON integrations.

- Rebuilt the project from scratch and continue to own backend development, the bot layer, infrastructure, deployment and operations.
- Automated delivery with GitHub Actions, GHCR images, SSH deployment, Alembic migrations and Docker Compose.
- Deployed Prometheus, Grafana and Loki/Promtail for application metrics and Docker logs; added operational reporting backed by PostgreSQL.

· Python · FastAPI · aiogram · PostgreSQL · Redis · Docker Compose · GitHub Actions · Prometheus · Grafana · Loki

BoltFather website (<https://boltfather.com/>)

Kvartirka

Software development & deployment

In development

A workspace for managing rental properties, bookings and financial records.

- Develop a NestJS/Fastify API and Next.js interface with Prisma/PostgreSQL and Redis: properties, bookings, payments, expenses and documents.
- Build portfolio financial workflows and automate Docker Compose deployment, health checks and smoke validation through GitHub Actions.

· TypeScript · NestJS · Next.js · React · Prisma · PostgreSQL · Redis · Docker Compose · GitHub Actions

Project website (<https://rentalkeeper.ru/>)

Supplier Price Parser

Software development & deployment

A service for collecting supplier price lists and preparing structured data for review and ordering.

- Build Telegram/XLSX ingestion, a protected operator workspace, catalog matching and order preparation in FastAPI.
- Preserve source snapshots and audit history in PostgreSQL; implement background jobs and advisory LLM candidate ranking with explicit operator confirmation.

· Python · FastAPI · PostgreSQL · Telegram · OpenPyXL · OpenRouter · Docker Compose · GitHub Actions

Deliveries

Software development & deployment

Jan 2025 — Present

Delivery planning with geographic zones, address processing and route calculation.

- Build a FastAPI/PostGIS backend and React map interface for address imports, geocoding, courier workflows and access control.
- Integrate OSRM routing, H3 zone recommendations for review and LLM fallback parsing of unstructured delivery text; maintain Docker and CI/CD workflows.

· Python · FastAPI · PostgreSQL · PostGIS · React · TypeScript · OSRM · H3 · Docker · GitHub Actions

Other engineering projects

User Balances

FEB 2025 — JUL 2025

Backend development for TON data processing: service APIs, block parsing, queue workers and database models.

· FastAPI · PostgreSQL · Redis · RabbitMQ · Taskiq

Scale API

MAR 2025 · PROJECT CLOSED

Developed an API and background synchronization for staking and on-chain data.

· FastAPI · PostgreSQL · Alembic · Docker

Printly3D

AUG 2025 — NOV 2025 · PROJECT CLOSED

Developed a Telegram bot and backend for 3D-printing order workflows.

· Python · aiogram · PostgreSQL · Alembic · Docker

Token Prices

Built token price monitoring and Telegram notifications with TON integrations, Redis state and automated Docker deployment.

· aiogram · Redis · TON APIs · Docker

Fanton Rent

APR 2025 — OCT 2025 · PROJECT CLOSED

Developed a bot for in-game asset rentals, integrating the Fanton API with wallet and reservation workflows.

· Python · aiogram · Redis · TON APIs · GitHub Actions

Technical skills

Core practice

Service development and production operations.

· Linux · Python · FastAPI · async I/O · Docker · Docker Compose · PostgreSQL · SQLAlchemy · Alembic · Nginx · reverse proxy
· REST APIs · service integrations

Hands-on engineering

Implemented in applications and deployment workflows.

· Go — existing codebase modification · SQLite · Redis · TypeScript · NestJS · React/Next.js · CI/CD · GitHub Actions
· Prometheus · Grafana · Loki · Keycloak · SAML 2.0 · OIDC

Project-specific tools

· Pulp — implementation in progress · PostGIS · OSRM · RabbitMQ · Taskiq · aiogram · TON integrations · LLM API integrations

Developing further

Basic exposure through individual deployment tasks; continuing to learn.

· Kubernetes · Helm · werf

Earlier management experience

Sales Floor Manager · M.Video-Eldorado · Aug 2016 — Sep 2022

Progressed from sales to management. Around three years managing teams of up to 20 people: organizing daily work, coordinating the team and taking responsibility for store-floor operations. Later transitioned into software engineering.

Education

Saint Petersburg State Institute of Technology (Technical University)

Bachelor's degree · Applied Informatics · 2017
